

GAZEBO WEIGHTS – SET OF 4

Before use you must fill each of the gazebo leg weights with water or sand and fit them around the gazebo legs to form a secure grounding system.

Suitable for poles with a maximum diameter of 25mm.

Easy to assemble.

No tools required.

Easy in and out screws can be fitted in seconds.

Caps on each compartment for added convenience whilst filling or emptying.

Particularly useful for patios, courtyards or any hard surfaces where stabilising guy ropes and pegs cannot be used.

Designed and manufactured in two pieces, the feet fasten either side of the pole. Two large plastic screws are tightened to grip and hold the gazebo leg.

Simply fill with sand or water for the required additional weight.

An essential requirement for gazebos, marquees and market stalls.

Please note

these may not be suitable for gazebos with side panels as there needs to be sufficient space around the base of the gazebo leg to place inside the gazebo foot.
